EDUCATION

Georgia Institute of Technology, Atlanta, GA, GPA: 3.92 December 2027

- **Major:** Bachelor of Computer Engineering (Concentrated in Cybersecurity and Distributed Systems/Software Design).
- **Technical Skills:** Python, Java, C, JavaScript, SQL, Bash/Shell, React, NumPy, Data Structures & Algorithms, Object-Oriented Design, Full-Stack Development, Frontend Development, Backend Development, REST API Design, API Integration, Application Architecture, Client-Server Architecture, Databases (MySQL, MongoDB), Software Testing, Unit Testing, Code Review, Debugging, Git/GitHub, Jenkins, CI/CD, Linux/Unix, AWS, .NET, Agile/Scrum, SDLC.

PROFESSIONAL EXPERIENCE

Fiserv, Technical Product Manager Intern (AI/ML development), Alpharetta, GA June 2026 - August 2026

- Engineered 4 full-stack AI/ML automation agents using Python, NumPy, GitHub Copilot & Claude Code, architecting scripting logic and exception handling for API integration across a 40-person team, cutting manual tasks 50%.
- Designed API integration and exception-handling workflows for automation agents in 55+ projects, partnering with SWEs on application architecture and system-level design to cut project turnaround by 5 hours/week.
- Owned compliance reporting pipeline, performing data cleaning and integration to resolve 85 data exceptions and maintain 98% accuracy across 15 reports, enabling quantitative, data-driven decision-making for senior leadership.
- Debugged and maintained reporting infrastructure and data pipelines supporting roadmap tracking for 10+ senior stakeholders, identifying and resolving data integrity issues to optimize product and engineering workflows each quarter.

State Farm Insurance, Data Engineering Intern, Metro Atlanta, GA October 2025 - May 2026

- Supported quantitative data decisions in a financial services environment by cleaning and validating 1,000+ structured records across networked infrastructure and data pipelines using Java and Excel, enhancing reliability of reporting.
- Applied Python/NumPy analysis to 500+ customer interaction records sourced from Salesforce, MongoDB, and Spark data systems, translating CRM metrics into insights supporting risk assessment, retention strategy and lead qualification.
- Redesigned data structures and query logic within large-scale, CRM-driven reporting systems, reducing manual processing effort by 37% across 12 major workflows and improving cross-functional access to insights for reporting teams.
- Executed UAT and data validation procedures, documented test results and reporting workflows in Confluence, and communicated findings through Excel, Tableau, PowerPoint, and SSRS to improve reporting and cross-team collaboration.

Prompt Mail Solutions, Software and Application Engineering Intern, Metro Atlanta, GA October 2023 - December 2024

- Engineered a full-stack web application serving 300+ users with Java, .NET, MySQL, and REST APIs, building object-oriented backend services, secure authentication workflows, and scalable database-driven frontend features.
- Developed and shipped code features using Git and Bitbucket, contributing to code reviews, debugging implementation issues, and working across Agile sprint cycles to deliver reliable, maintainable, high-quality production software releases.
- Implemented and tested backend application features using Java, .NET, MySQL, and REST APIs, resolving integration and data-flow issues to improve reliability, maintainability, and performance across production software features.

Assets Edge, DevOps and E-commerce Intern, Cumming, GA June 2022 - August 2022

- Documented deployment gaps and core dependencies with Jenkins, Docker and shell scripting, defining engineering requirements that drove scalable CI/CD pipeline improvements and more reliable production software releases.
- Optimized Jenkins CI/CD pipelines and Docker/Kubernetes deployment workflows, partnering with DevOps engineers to reduce deployment time by ~20%, improve build reliability, and minimize release bugs in production systems.
- Tested backend and e-commerce app features by writing unit tests, debugging 20+ software issues, supporting REST API integrations, and contributing to Agile code reviews to improve production application reliability and code quality.
- Performed root cause analysis on system logs and operational datasets in Linux/Unix env. using Splunk, documenting findings and recommended actions in Confluence to improve system reliability and incident response processes.

PROJECTS & LEADERSHIP

Automated Misinformation Detection Engine, Project Developer, Atlanta, GA March 2026 - Present

- Built and deployed a Python-based risk-scoring system using custom data structures/algorithms, statistical/NLP models, and information retrieval via REST APIs, achieving ~90% classification accuracy and <200ms inference latency.
- Architected a full-stack React frontend for an AI/ML-driven risk engine to visualize a 0-100 credibility score, reducing false positives 25% and enabling users to analyze and interpret results with dynamic, real-time feedback.

Georgia Tech Coding Club, VP of Artificial Intelligence/Machine Learning, Atlanta, GA August 2025 - Present

- Organized coding workshops focused on core computing concepts to build members' network and programming skills.
- Increased club meeting attendance and membership to 60+ members by fostering a collaborative technical community.

LULU Bookstore, Co-Author, Cumming, GA July 2023 - Present

- Co-authored 2 beginner-focused technical books on Python and Artificial Intelligence, developing 50+ pages of instructional content covering algorithms, data structures, control flow, debugging techniques, and foundational concepts.
- Created 30+ step-by-step tutorials and annotated code examples using Python scripting, API integration, and data handling workflows, translating complex technical concepts into clear, executable learning materials for the readers.
